

## **REALIZATION OF RECURSIVE QUERIES IN THE DYNAMIC ASSOCIATIVE RESOURCE NETWORK**

Ludmila Yu. Zhilyakova (*zhilyakov@aaanet.ru*)  
*Pedagogical Institute SFedU, Rostov-on-Don,*

The network model is represented by an oriented weighted graph in which any two vertices are either not adjacent or connected by a pair of oppositely directed edges. Resources are assigned to vertices; the weights of edges indicate the ability to conduct a resource. The recursive queries are used for the control over direction of resource distribution.
